CV: Assistant Professor at University of Lisbon, Instituto Superior Técnico (IST), Department of Civil Engineering, Architecture and Geo-recursos (DECivil). He is, currently Executive Director of DECivil, Director of DECivil Laboratories and Senior Fellow with the Degree of Specialist in Structures of the Portuguese Engineers Society. He was one of the founders and is currently the Vice-President of the Portuguese Society for Construction History Studies (SPEHC). He develops research activity at IST as a member of the CERIS research center. He has carried out scientific research and technical consultancy work in the areas of Design and Analysis of Buildings Structures, Seismic Assessment of Old Buildings and Construction History.

7ICCH

Seventh International Congress on Construction History

He teaches at IST different courses of the master courses in Civil Engineering and Architecture and supervised several master's and doctoral studies in Civil Engineering and Architecture. In the scope of his activity as structural engineer he has designed several reinforced concrete, structural steel, masonry and timber structures. He is specialist in structural analysis and design of reinforcement solutions for old buildings with masonry structures. He was consultant in the recently "Parque Escolar" rehabilitation program of the secondary schools for Seismic Assessment of Masonry Buildings. He is author of several publications in national and international Scientific Journals and Scientific Conferences and he was behind several courses on rehabilitation and structural reinforcement of old buildings.
